

# Our track record speaks for itself

Energy lives here™

Only ExxonMobil brings a 75-year butyl track record to the tire industry. Since inventing butyl rubber in the 1930's, ExxonMobil has never stopped innovating and continues to offer a portfolio of halobutyl products for the manufacture of high performance inner liners.

With two new plants being built, our global capability to provide customers with a secure supply of quality halobutyl continues to meet the critical needs of a growing industry.

Inner liners that offer improved air retention can drive your business further, providing consistent fuel economy, tire performance and

reduced service intervals - all key desires of consumers. Advanced inner liner materials can help achieve significant weight savings, resulting in further cost savings.

The ExxonMobil butyl technology team is driven by a passion for constant innovation. Let us share our expertise on the production of high performance tire inner liners. Your customer's satisfaction and expectation of consistent tire performance and reduced maintenance are at the heart of the chemistry that drives us.
